

## AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

### Listing of Claims:

1           1. (Currently amended) A computer-implemented method of facilitating a  
2     distributed search for a procurement request, comprising:  
3           receiving a ~~search~~the procurement request from a user;  
4           requesting a remote ~~information source~~supplier to conduct a remote search  
5     to satisfy the procurement request;  
6           initiating a local search of a local information source;  
7           receiving results of the remote search;  
8           filtering results of the remote search by applying organizational  
9     procurement controls to the results of the remote search, whereby the  
10    organizational procurement controls can be applied to results of the remote search  
11    which is performed by the remote supplier;  
12           merging said remote search results with results of the local search; and  
13           presenting said merged search results to the user.

1           2 (Original) The method of claim 1, further comprising:  
2           filtering said remote search results with a set of local rules..

1           3. (Original) The method of claim 2, wherein said filtering comprises  
2     editing said remote search results according to a set of rules regarding information  
3     that may be presented to the user.

1           4. (Original) The method of claim 1, further comprising:  
2           selecting said remote information source from multiple information  
3           sources.

1           5. (Original) The method of claim 1, wherein said remote search is  
2           conducted without the user being connected to the remote information source.

1           6. (Original) The method of claim 1, wherein the remote information  
2           source employs a user interface different from a user interface employed by the  
3           local information source.

1           7. (Original) The method of claim 6, wherein said presenting comprises  
2           displaying said merged search results with the user interface employed by the  
3           local information source.

1           8. (Original) The method of claim 1, wherein said requesting comprises  
2           identifying to the remote information source a context in which to execute the  
3           remote search.

1           9. (Original) The method of claim 8, wherein said context comprises an  
2           identity of the user.

1           10. (Original) The method of claim 8, wherein said context comprises an  
2           identity of an organization operating the local information source.

1           11. (Original) The method of claim 8, wherein said context comprises a  
2           language.

1           12. (Original) The method of claim 1, wherein the remote information  
2 source comprises an electronic marketplace.

1           13. (Original) The method of claim 1, wherein said remote search and said  
2 local search are performed at least partially in parallel.

1           14. (Currently amended) A computer readable storage medium storing  
2 instructions that, when executed by a computer, cause the computer to perform a  
3 computer-implemented method of facilitating a distributed search for a  
4 procurement request, the method comprising:  
5           receiving a ~~search~~ the procurement request from a user;  
6           requesting a remote ~~information source~~ supplier to conduct a remote search  
7 to satisfy the procurement request;  
8           initiating a local search of a local information source;  
9           receiving results of the remote search;  
10          filtering results of the remote search by applying organizational  
11 procurement controls to the results of the remote search, whereby the  
12 organizational procurement controls can be applied to results of the remote search  
13 which is performed by the remote supplier;  
14          merging said remote search results with results of the local search; and  
15          presenting said merged search results to the user.

1           15. (Currently amended) A method of conducting a distributed electronic  
2 search for a procurement request concerning a desired procurement item,  
3 comprising:  
4          receiving from a user a description of an item the user desires to procure;

5 | issuing a request to a remote ~~procurement information source~~supplier to  
6 | conduct a first search for items matching said description, without the user  
7 | connecting to the remote procurement information source;  
8 | providing the remote procurement information source with contextual  
9 | information for said first search;  
10 | performing a second search of a local procurement system for items  
11 | matching said description;  
12 | receiving a first set of results responsive to said first search;  
13 | filtering said first set of results by applying organizational procurement  
14 | controls to the first set of results of the remote search, whereby the organizational  
15 | procurement controls can be applied to the first set of results of the remote search  
16 | which is performed by the remote supplier~~with one or more procurement rules;~~  
17 | and  
18 | presenting to the user, through a single interface, said first set of results  
19 | and a second set of results responsive to said second search.

1 | 16. (Original) The method of claim 15, further comprising:  
2 | authenticating one or more of the user and the local procurement  
3 | information system to the remote procurement information source.

1 | 17. (Original) The method of claim 15, further comprising:  
2 | selecting the remote procurement information source from a set of  
3 | procurement information sources.

1 | 18. (Original) The method of claim 15, wherein said issuing comprises  
2 | providing the remote procurement information source with information for  
3 | identifying a context in which to execute the requested search.

1           19. (Original) The method of claim 15, wherein said filtering comprises  
2 removing from said first set of results any items that violate the procurement  
3 rules.

1           20. (Original) The method of claim 19, wherein the procurement rules are  
2 designed to restrict items that may be procured by the user.

1           21. (Original) The method of claim 15, wherein said first search and said  
2 second search are performed at least partially in parallel.

1           22. (Currently amended) A computer readable storage medium storing  
2 instructions that, when executed by a computer, cause the computer to perform a  
3 method of conducting a distributed electronic search for a procurement request  
4 concerning a desired procurement item, the method comprising:  
5           receiving from a user a description of an item the user desires to procure;  
6           issuing a request to a remote ~~procurement information source~~supplier to  
7 conduct a first search for items matching said description, without the user  
8 connecting to the remote procurement information source;  
9           providing the remote procurement information source with contextual  
10 information for said first search;  
11           performing a second search of a local procurement system for items  
12 matching said description;  
13           receiving a first set of results responsive to said first search;  
14           filtering said first set of results by applying organizational procurement  
15 controls to the first set of results of the remote search, whereby the organizational  
16 procurement controls can be applied to the first set of results of the remote search  
17 which is performed by the remote supplier~~with one or more procurement rules;~~  
18 and

19           presenting to the user, through a single interface, said first set of results  
20   and a second set of results responsive to said second search.

1           23. (Currently amended) A system for facilitating a distributed search for  
2   | information for a procurement request, comprising:  
3           a local information source configured to provide information to local users  
4   through a first user interface;  
5           a communication module configured to enable said local information  
6   | source to communicate with a remote ~~information source~~ supplier, wherein the  
7   | remote ~~information source~~ supplier is configured to provide information to users  
8   through a second user interface different from the first user interface;  
9           a set of rules regarding information that may be displayed to a first local  
10   user; and  
11          a processor configured to initiate, in response to a request from the first  
12   local user:  
13          a remote search of the remote information source; and  
14          a local search of said local information source;  
15          wherein results of said remote search are filtered by applying  
16   | organizational procurement controls to the results of the remote search, whereby  
17   | the organizational procurement controls can be applied to results of the remote  
18   | search which is performed by the remote supplier through said set of rules and then  
19   merged with results of said local search for display to the first local user through  
20   the first user interface.

1           24. (Original) The system of claim 23, further comprising:  
2           authentication means for authenticating one or more of the system and the  
3   first local user to the remote information source.

1           25. (Original) The system of claim 23, wherein said remote search and  
2   said local search are performed in parallel.
